

Control multiple doors.

Intercom Accessory Series: Door Unlock Expander Module

The INTIPDM Door Unlock Expander Module enables a door monitor to control a second door or gate. Built-in relay output allows the control of any NO / NC device. The output is activated by video door monitor or smartphone.

- RS485 communication with door stations
- NO / NC relay receivers for door control
- Input for door status monitoring
- Input for external door control
- Powered by 12VDC
